DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, the recitation that the second gate enables a second "at least partly lateral channel portion" is unclear as to the exact geometry and location of this second channel region. What other channel configurations may be generated by the second gate, and how do any additional configurations integrate with the vertical channel portion?

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are further rejected, insofar as understood, under 35 U.S.C. 103(a) as being unpatentable over the Japanese patent publication (05-343691) to Yuji et al. As seen, for example, in FIGS. 1 and 5 of Yuji, an insulated gate device may be formed with two independently biased gate members. One which forms a vertical channel such as gate (21), and another which forms a lateral channel such as gate (22).

The proximity of these gates would produce channel regions that are combined, as claimed.

This reference also shows multiple transistor cells and supporting circuitry, as claimed. To the extent the claimed invention is understood, this reference appears to encompass all of the features of the invention.
